**EMPLOYER OBLIGATIONS**

**AUSTRALIA**

Sections 34-38 of the Workplace Health & Safety (WHS) Act 2011, requires employers to minimise risk where reasonably practicable to employees. Safe Work Australia published the “Falling Objects Fact Sheet” in 2012 that required tools and materials to be tethered when working at heights.

**NEW ZEALAND**

All tools and equipment are to be attached by a cord unless another effective method is used to prevent a falling hazard to meet the requirements of the Health Safety in Employment Act 1992. **AS/NZS 4488** also requires all tools and equipment to be tethered when working at heights.

## WHAT DOES ANSI/ISEA 121 ENTAIL?

The ANSI (American National Standards Institute) and ISEA (International Safety Equipment Association) 121 – 2018 is a standard that consists of design, testing, performance and labelling requirements for tool tethering systems and containers used to transport, secure and position tools and equipment at heights.

The 121 standard gives workers guidance for best practice on what equipment to use when implementing a tethering program. How to implement a program, and assistance in doing so will be provided by your safety expert.

## THE CATEGORIES OF EQUIPMENT IN THE ANSI/ISEA 121-2018 STANDARD

### ANCHOR & TOOL ATTACHMENTS

### TOOL TETHERS

### CONTAINERS

# DROP FREE ZONE

ESTABLISHING BEST PRACTICE

### A CONTAINERS

Bags and buckets used to transport tools and equipment to and from at heights work zones. Tool pouches, bags and hoist buckets/bags should have a secure closure or “top” that can cover contents and prevent them from spilling if tipped.

If a container does not have a secure closure it must have tethering points available.

### B TOOL TETHERS

Tethering is the retention of the tools and equipment being used to the anchor points that hold them, most commonly with a tool lanyard. These lanyards should have the proper connections on each end for the tools and anchors being used. They should also be made with a shock-absorbing design whenever possible.

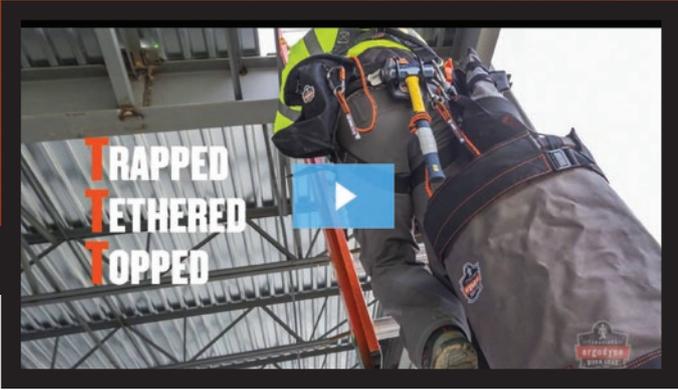

### C TOOL AND ANCHOR ATTACHMENTS

Retrofit attachment points installed onto tools, equipment or fixed anchor locations for connecting lanyards. Most tools do not come with a secure attachment point built into the tool. In these situations, a secure attachment point must be created.

### COLOUR COORDINATE FOR QUICK AND EASY IDENTIFICATION

1

### IDENTIFY

WHAT PRODUCT YOU WANT TO SECURE AND HOW

2

### TRAP

CREATE A CONNECTION/ TRAP POINT

Trapping refers to retrofitting a connection point onto a tool for a more secure attachment.

3

### TETHER

LINK THE TRAP POINT BETWEEN YOU AND THE TOOL

Once all tools have a connection point the appropriate tethering solution can be selected. Consider the following factors to select the appropriate solution: weight of tool, type of connector(s) on lanyard, clearance, reach, and snag hazard.

4

### CONNECT

SECURING THE TETHERING DEVICE TO A DETERMINED ANCHOR POINT

As a final step, it is imperative to connect to a determined and secure anchor point. This could be a tool belt, topping bucket, bag, or by using an approved static anchor point.

### PRYME TIP:

Not all tool lanyards are created equal.

Always select a Shock Absorbing SQUIDSTM F(x) Tool Lanyard.

SQUIDSTM F(x) Tool Lanyards feature shock absorbing poly webbing that limit the drop forces on workers at heights.

These next generation SQUIDSTM F(x) Tool Lanyards increase both the safety and efficiency of workers at heights.

# EQUIPMENT TRANSPORT 101

## THE DO'S AND DON'TS OF DROPS

### RISKS

#### ASSOCIATED WITH POOR EQUIPMENT TRANSPORTATION

##### SPRAINS OR STRAINS

Many times, workers try to carry all their tools and equipment to heights in case they need something they don't anticipate. This can lead to them overloading themselves while climbing, taking a toll on the body.

##### FATIGUE / EXHAUSTION

That toll may not lead to a muscle pull or strain, however trying to carry too much up during a long climb on a hot day could stress the body in other ways. Stress or exertion – coupled with extreme conditions like heat – can be dangerous.

##### FALLING OBJECT / STRUCK-BY

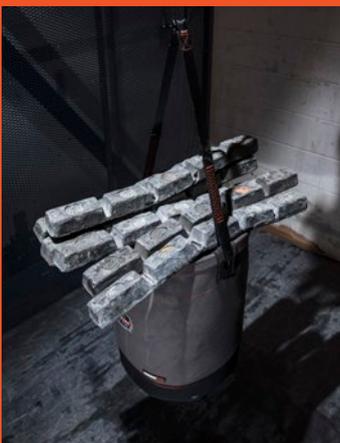

Improperly carrying equipment to heights like holding tools in your hands, slipping them into your pocket or not securing them when hoisting can easily lead to those objects taking a tumble below.

##### FALLS TO LOWER LEVEL

Too much weight on a worker can drag them down, not having a lifting plan in place for hoisting can swing a load into someone, or not storing equipment in an organized fashion while at height can lead to trip hazards all causing a potential slip, trip or fall.

## CERTIFIED EQUIPMENT

THERE ARE HUNDREDS OF BAGS, BUCKETS, POUCHES AND HOLSTERS OUT THERE, BUT YOUR STANDARD 19L BUCKET IS NOT GOING TO BE ENOUGH AT HEIGHTS. PORTABLE CONTAINERS THAT ARE HOISTED AND STATIONARY CONTAINERS THAT ARE CARRIED SHOULD BE RATED.

#### STATIC TESTING

Portable and stationary containers should be statically pulled or loaded with a 5:1 safety factor.

#### INVERTED STATIC TESTING

Containers designed to carry contents that cannot be tethered should have a top or closure that is tested upside down to a 2:1 safety factor.

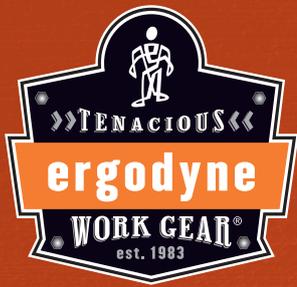

#### DYNAMIC TESTING

Containers should have drop testing conducted, as well including attachment points meant to anchor lanyards.

## BEST PRACTICES

- **EQUIPMENT TRANSPORTATION BEST PRACTICES TO MITIGATE THOSE RISKS.**
- **NEVER CARRY OBJECTS IN YOUR POCKETS**
- **ALWAYS MAINTAIN THREE POINTS OF CONTACT** (Never Carry a Container in your Hand)
- **LIMIT THE WEIGHT ON A WORKER'S BODY** (Hoist, if possible)
- **USE CONTAINERS WITH SECURE TOPS AND/OR TETHERING ANCHOR POINTS**
- **USE MECHANICAL ADVANTAGE TO HOIST, IF POSSIBLE**
- **HAVE A LIFT PLAN IN PLACE - EVEN THOUGH A CRANE IS BEING USED**

# SKULLERZ BUMP CAPS

Bump Caps do not provide protection against effects of falling / thrown objects or moving suspended loads and should not be used instead of an industrial safety helmet as specified in EN397 or ANSI Z89.

Innovative ventilation system and sculpted rear opening allow the shell to protect and breathe

Durable, impact-resistant ABS plastic construction outside; comfortable thermo-formed foam padding inside

Certified forehead and crown coverage means maximum protection from bumps and bangs

Unique flanged shell flexes for fit and comfort while ribs provide stability and support

## EN 812: 2012 CERTIFIED PROTECTION

EN 812 is currently the world's only standard for bump cap design and performance. Certification requires the cap and shell system undergo rigorous testing to prove protection from impact and penetration under various conditions.

Skullerz 8950, 8960, and 8945 Bump Caps provide certified protection you can count on for those tight spots on the job.

# USER INFORMATION

- BUMP CAPS ARE MADE TO ABSORB ENERGY OF A BLOW BY PARTIAL DESTRUCTION OR DAMAGE TO SHELL
- THOUGH SUCH DAMAGE MAY NOT BE READILY APPARENT, ANY BUMP CAP SUBJECTED TO SEVERE IMPACT SHOULD BE REPLACED
- FOR ADEQUATE PROTECTION, CAP MUST FIT OR BE ADJUSTED TO SIZE OF USER'S HEAD
- DO NOT APPLY PAINT, SOLVENTS, ADHESIVES OR SELF-ADHESIVE LABELS UNLESS INSTRUCTED BY THE MANUFACTURER

Work-Related sprains and strains or Musculoskeletal disorders (WMSDs) are the most common condition for which workers' compensation claims are currently lodged. Complex joints like the knees and back are an injury hotspot for workers.

### PREVENTING SPRAINS AND STRAINS

- Ergonomic solutions like using the right positioning, raising work off the floor and taking small breaks to relieve stress all assist in preventing sprains and strains.
- Used correctly ergonomic PPE such as back supports, knee pads and kneeling pads can provide support, cushioning and serve as a reminder to use correct bending, lifting or kneeling techniques.

# PROPER LIFTING

## FITTING A PROFLEX BACK SUPPORT

- ProFlex® Back Supports should fit snugly around your hips with the front of the support two-fingers width below your navel.
- The straps should be placed securely on your shoulders without causing tension.
- The hook & loop fasteners should be closed completely.

**1** Slip the back support on.

**2** Grasp each end of the waistband. Stretch the right end across the left and attach. The upper edge of the waistband should be below the navel. Fasten outer elastic bands loosely at your side.

**3** Adjust straps for a comfortable fit without tension.

**4** Before you lift - grasp the outer elastic bands and stretch forward as far as possible.

**5** Secure bands in comfortable position.

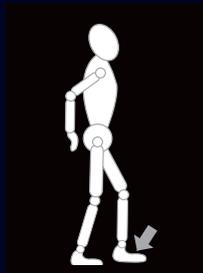

## EIGHT COMMANDMENTS OF LIFTING

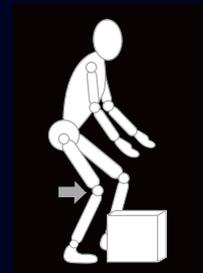

**1** Plan your lift and test the load.

**2** Ask for help.

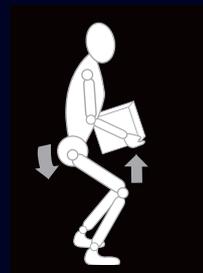

**3** Get a firm footing.

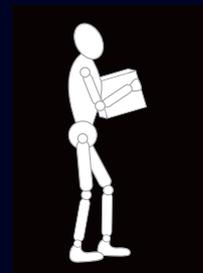

**4** Bend your knees.

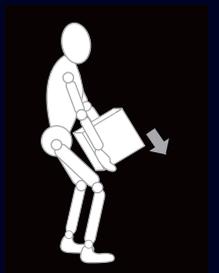

**5** Tighten your stomach muscles.

**6** Lift with your legs.

**7** Keep the load close.

**8** Keep your back upright.
